

RASIKY

Rasiky Product Range 2025

PU Foam

Expanding polyurethane foam filler is widely used on any building site in the world primarily to seal against air and water leakage and to avoid insulation leaks in respect of sound as well as heat. The product cures quickly which facilitates a stable environment for later trades without time delay and can be cut, sanded, sealed and painted over easily with standard sealants and paints. Always use the can upside down. Can be stored on the RapidGun applicator for up to 5 days. Please also see our RapidGuns and RapidCleaner products which are necessary to apply Gun Type foam canisters.

Multipurpose

Multipurpose PU Foam is ideal for installing doors and windows and most other applications which do not require fire rating and are not permanently submerged.

Volume: 750ml Fill weight: 850gr

Do not over-tighten Can onto RapidGun Applicator- only tighten with 2 fingers: If screwed onto applicator too tightly damage to the valve can occur!

Fire Retardant

Fire retardant PU Foam is ideal for installing doors and windows along emergency exit routes and all other applications which are not permanently submerged. B1 rated fire resistance according to DIN4102 part 2.

Volume: 750ml Fill weight: 850gr

Do not over-tighten Can onto RapidGun Applicator- only tighten with 2 fingers: If screwed onto applicator too tightly damage to the valve can occur!

RASIKY

Waterproof/Submersible

Waterproof PU Foam is ideal for filling holes below ground level in concrete casting works, pools, ponds and water reservoirs and will not get waterlogged even when permanently submerged.

Volume: 750ml Fill weight: 850gr

Do not over-tighten Can onto RapidGun Applicator- only tighten with 2 fingers: If screwed onto applicator too tightly damage to the valve can occur!

PU Foam Cleaner

Basically Acetone in a spray can which is used to clean the applicator gun for storage as well as the valve of used but not empty foam bottles. Wet foam can be dissolved with the cleaner as well without etching into standard substrates found on site (please check on a sample area). Once hardened the foam can only be removed/cleaned off mechanically by scraping, cutting or sanding.

Volume: 600ml Fill weight: 400gr

Do not over-tighten Can onto RapidGun Applicator- only tighten with 2 fingers: If screwed onto applicator too tightly damage to the valve can occur!

RASIKY

RapidGun PU Foam Applicators

Precise dosage and aim are crucial to economical use of PU Foam which is only achievable by using a gun type applicator. The commonly in DIY stores available PU foam bottle with single-use plastic nozzle is highly inconvenient to use for 3 main reasons:

- 1) the plastic nozzle is not stiff enough to get the foam to where it should go.
- 2) the trigger mechanism cannot be controlled i.e too much or too little foam will be dispensed.
- 3) once opened the can must be thrown away and cannot be kept for the next day which results in high wastage.

All those drawbacks are taken care of by using any of our PU Foam Applicator Guns.

DIY Gun

For the first time user or when you only need a gun every few months. Plastic gun body and handle, Aluminum alloy adapter nickel coated, Stainless steel barrel and needle, Brass nozzle.

Contractor Gun

For the experienced user working more than 1 job a month.

Aluminum alloy body nickel coated, Aluminum alloy adapter and brass nozzle nickel coated, TPR+PP dual color handle, Stainless steel barrel and needle

RASIKY

Professional Gun

For the professional window fitter who uses it most days. Aluminum alloy body and iron trigger with teflon coating, Aluminum alloy adapter teflon coated, teflon ball, TPR+ PP dual color handle & TPR flow regulator, Stainless steel barrel, needle and brass nozzle are all teflon coated.

RapidBits

Standard issue drill and driver bits specifically for the use of the RapidScrew

SDS bits:

6,0mmx 260mm: usable length 210mm

6,5mmx 260mm: usable length 210mm

7,0mmx 260mm: usable length 210mm

HSS long:

6,0mmx140mm: usable length 130mm

Driver Bits:

Torx 30, 1/4 inch shaft x 25mm. The RapidScrew Driver Bit

Torx 25, 1/4 inch shaft x 25mm. The Decking Screw Driver Bit

Pozidrive No2, 1/4 inch shaft x 25mm. The Most Used Driver Bit

RASIKY

RapidScrew- The ultimate wall anchor

A self-tapping wall anchor which does NOT need wall plugs of any sort.

Predrill the work piece with a 6mm HSS bit, put it in place, use a 6mm masonry bit through the predrilled hole into normal brick, mortar and insert the screw directly through the part to be fixed into masonry.

For harder substrates like lintels and reinforced concrete use 6.5mm SDS drill.

Granite and similar rock may need a 7.0mm SDS bit to be able to turn the screw in all the way.

Longer SDS bits are necessary than the usual standard length as the screw alone is 132mm long and ideally the hole is a bit deeper to avoid drill dust blocking the tip. This application method will neither push nor pull your workpiece away or towards the wall therefore it is ideal to fit window and door frames and similar work pieces like kitchens and built-in-cupboards.

This method alleviates any packing materials or wedges to keep the door/window frame plumb which makes the fitting of such frames infinitely faster and more precise.

Once all screws are inserted fill the gap between the frames and the wall with Rasiky RapidFoam to seal against draft and noise.

To achieve a pulling action on the work piece predrill with a standard 8mm HSS bit and the screw will pull any beam flush up against any substrate.

The screw can also be used to tap into structural steel/stainless steel, aluminium and wood and it can be cut shorter from the tip.

For these applications our extra long 6mm HSS drill bit does the perfect job. Combined with our econo packs of screwdriver bits you are ready for any installation job. Even insulating hot/cold water pipes or sealing the roof to keep birds out.

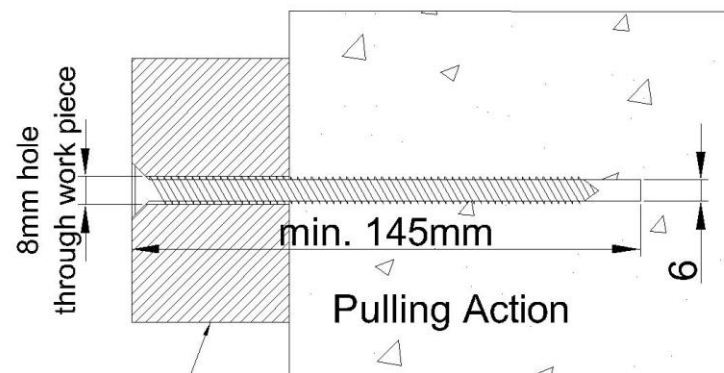

RASIKY

RapidScrew

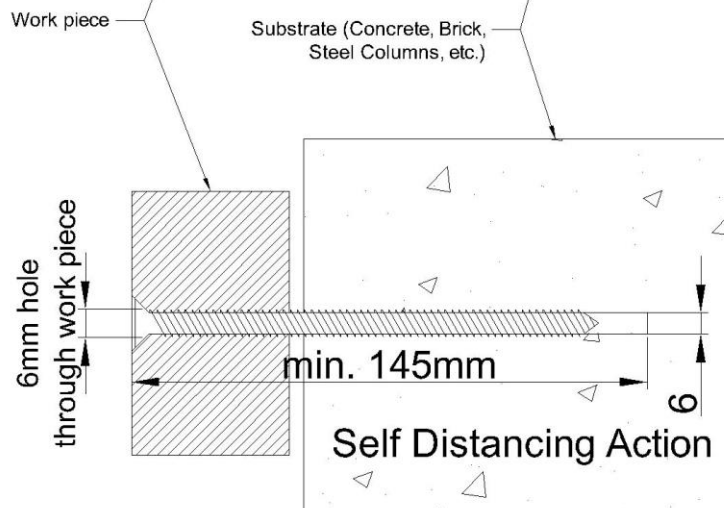

Usage Instructions

Direct to Concrete.
No plug needed.

Predrill work piece with 8mm
pilot hole for **Pulling Action**
(beams, cleats, brackets etc.)

Predrill work piece with 6mm
pilot hole for **Self-Distancing Action**
(door/ window frames,
battens, BIC's etc.)

Position work piece and drill full
length 6mm hole into wall.
Clean out dust.
Drive screw in with Torx 30 bit.

Where to buy?

For low volume orders and/or outlying areas the most cost effective places to buy our products are our web store at **WWW.RASIKY.COM**,

makro  online or **takealot** .

Prepaid direct orders will be shipped directly to your door.

For larger quantity orders please get into touch with us.

Just drop us a mail with your requirements on **wolf@rasiky.com** or **sales@rasiky.com**

Thank you!
